New Balance 1540 V2 (*most stable*)

Top Recommendations (in bold and underlined)

****Neutrality with PRI tests after walking in shoe determines which shoe works for each patient.****

Cushion and guidance categories work best with PRI orthotics

Qualities of a Good Shoe:

Heel counter does not fold in

Shoe bends in the toe box easily and not in the middle of the shoe. Toe box bend should not be too stiff.

No outside heel give

Heel height should be symmetrical

Qualities of a Poor Shoe:

****When walking you should be able to sense stability of the heel throughout the gait cycle as well as arch support/contact as you step through and push off your big toe.**
